Contents:

(With RGB model)

Beforefirst use:

As battery charge slowly depletes in storage it is recommended to expose the solar bollard to a full day's sun before first use. The battery may be fully discharged on arrival

Use the Allen key provided to loosen (no need to remove) the three grub screws securing the solar lighthead to the stem on the bollard. Remove the light head.

Orion Premium RGB - Press the red ON/OFF button once, the light will operate and is now controllable by the supplied remote.

Orion Premium White (no remote)- Press the red ON/OFF button once, the light will operate at 6000k (kelvin) cool white. 2nd press of the button the light will operate at 4000k, daylight. 3rd press of the button the light will operate at 3000k, warm white. 4th press of the button turns the light off. Select the preferred CCT.

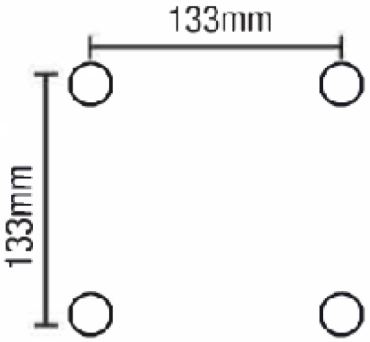

Return the light head to the stem and resecure.

Control Instructions:

- — Turn ON the light . Or Press it for 4 seconds to reset to default setting.
- ○ Turn OFF the light
- Warm White 3000k and adjust the CCT
- Cool White 6500K and adjust the CCT
- \+ Increase the brightness
- – Decrease the brightness
- 4H TIME Set the light to work 4 hours per night
- 8H Set the light to work 8 hours per night
- Use colour wheel to set colour

Baseplate Template
